

Fall Mad Libs

Welcome to Fall Mad Libs, the perfect game for autumn fun! Coded in Python, it works just like your Mad Libs books from when you were younger, but on a computer. With three fall-themed stories to choose from, there's endless fun! To begin, the program asks you to choose from one of three stories: Halloween, Apple Picking, or Leaf Sightseeing. Once you enter which story you want, the fun begins! Enter words in each category as the program asks you, then watch your story be written. Once you're done reading the story (and laughing) you can either play again, as many times as you want, or choose to leave the game for now. From sensibly silly to insanely illogical, there's no end to the way you can play!
